Flow of the system:

Basically this software is working on 3 modes: Ocean / Air / Road

There are 30+ country defined with shipping formulas. The shipping formulas for Ocean is depend on size/ area (Cubic foot) of package. And Air shipping formulas are depends on weight of the package.

All country defines email templates, so when package received system automatically send package received notification to customer. Also admin can send email to individual customer about any inquiry.

Once package received Staff will enter package details.

Enter Package - Here all package information is added including invoice. The information is like package weight, width, length, shipper, via, etc. Shipping fee is calculated here based on country formula.

After package enter in system it will added in Active package. Then staff assign container for package. Also sometimes agent discount are applied for package.

Following are the different reports:

Active package report - Contains report of Package that enters earlier in system.

Agent Shipping Details Report - Package containing container and Agent discount are applied here.

Manifest Report - It is final report containing all required information.

Agent shipping and manifest report created container wise.
